

Expression of interest: Improving NHS Health Check uptake using a point of care lipid test as an engagement tool

One of the priorities of NHS North West London (NWL) ICB is to [optimise care people with long-term conditions \(starting with cardiovascular disease\) through innovation](#).

[Imperial College Health Partners](#) is exploring how new technology and innovation can improve the detection of CVD risk by reducing the detection gap and optimising treatment and care.

We're looking for primary care teams in North West London who are interested in replicating an NHS Health Check engagement model trialled in the [East of England](#), sending out home point of care lipid tests to encourage high risk residents to attend their health checks.

Our offer:

We are providing [PocDoc](#) tests to interested teams. PocDoc is a digitally enabled point of care lipid test that can generate a healthy heart check in under 10 minutes. It can be self-administered by residents, at home.

If you are a primary care team based in North West London, wanting to increase your NHS Health Check uptake, and interested in supporting this evaluation, Imperial College Health Partners will provide:

- [PocDoc](#) digitally enabled point of care lipid tests which can provide results within 10 minutes
- Pathway support for test delivery and recording of results.
- An evaluation of the benefits of this novel technology, including capturing feedback from service users and staff and following up resident outcomes.
