

FIRST GREEN

STEM FIELD TRIPS

TURNING GOLF COURSES INTO CLASSROOMS!

Golf courses are awesome – they are living, growing habitats and havens for wildlife. Greenkeepers are the professionals who look after the golf course using STEM skills daily to help them protect nature and the environment. First Green field trips provide fun outdoor learning activities with a bit of golf too, on golf courses nationwide.

BE INSPIRED BY THE GOLF COURSE

A First Green field trip provides a variety of inclusive hands-on practical learning stations, where the golf course's greenkeeping team teach some of the skills that they use every day to make golf courses awesome!

PRACTICAL STEM LEARNING

Each station will feature science, technology, engineering or maths skills used by professional greenkeepers every day. All delivered in a safe, real-world setting surrounded by nature. We have spent time making sure all stations link to the current UK curricula, with the help of STEM Learning.

WHAT'S INCLUDED

- » Half day field trip
- » Practical hands on STEM learning stations
- » A fun golf activity
- » And no charge for the field trip!
